

## Better Quality of Life for All Residents

Alzheimer's and other forms of dementia are part of aging that often cause understandable concern. Our community is committed to helping maximizing quality of life – without compromising safety – for individuals with dementia.

To meet that goal, we rely on **STANLEY Healthcare's WanderGuard BLUE** solution. This innovative technology helps those with

memory impairment enjoy freedom and mobility without the risk of wandering or elopement.

We have designed our approach and selected our solution to give families assurance that their loved one can safely and securely take advantage of what our community offers.

### *Discreet protection*

Residents who are at risk of wandering wear a personalized wireless tag on the wrist. These tags are among the smallest in the industry. They offer a sleek, modern design and are very comfortable to wear.

Each person's WanderGuard BLUE tag communicates seamlessly with door controllers, which issue alerts as a resident approaches an exit. If a resident tries to leave, the system can also physically lock a door. When staff members accompany residents outside the monitored area, they can easily override the alarms and allow seamless movement through the community.

### *Simple maintenance*

One of the best things about WanderGuard BLUE is the discreet design of its components. When visiting the community, you likely won't notice the wrist tags residents are wearing or the door controllers and other components installed within our community. Everything operates wirelessly, so staff can even check the battery level on a wrist tag without disturbing the resident who is wearing it.

Every resident deserves to enjoy mobility and dignity without the safety risks of wandering or elopement. WanderGuard BLUE is our trusted resource for delivering that experience for our residents with Alzheimer's or other forms of dementia.
